SUMMARY

Principal-level technical leader with 13+ years of experience across software engineering, cloud DevOps, and product leadership, specializing in AI-enabled systems, legacy modernization, and large-scale platform transformation. Proven track record leading distributed teams to re-platform complex stacks, design target-state architectures, and ship resilient, data-intensive systems in regulated environments (insurance, payments, banking, tax, healthcare).

Blend of **hands-on architecture** (distributed systems, data modeling, integration) and **executive-facing leadership** (strategy, trade-off decisions, portfolio steering). Strong background in **DevOps, SRE, CI/CD, test automation, and reliability engineering**, now applied to **GenAI/LLM-driven products** and automation at scale. Recognized mentor and coach for Product Owners, engineering leaders, and agile practitioners (LeSS/Kanban), consistently connecting technical decisions to measurable business outcomes.

Core strengths: System & enterprise architecture · Legacy re-platforming · AI/LLM-based automation · Cloud & DevOps (Azure-first, multi-cloud aware) · Distributed systems & integration · Data-driven decision making · Agile at scale · Executive stakeholder management.

EXPERIENCE

Zurich Insurance – Remote (LATAM, Switzerland, Spain and US) - 5 hours overlap

Lead AI Technical Program Manager June 2023 – Present

Technical program lead for digital channels and cross-enterprise agile portfolios, driving AI adoption, platform modernization, and delivery excellence across multiple teams and vendors.

Architecture, AI & Technical Leadership

- Used **Azure Copilot** to translate high-level product requirements into granular, testable user stories and acceptance criteria, improving clarity and reducing rework across engineering and QA.
- Leveraged **GitHub Copilot** to generate PoC code snippets and API integration examples, de-risking technical approaches before committing full engineering capacity.
- Applied AI assistants (Copilot, GitHub Copilot) to produce automation scripts (Selenium, Cypress, Playwright) from manual test cases, accelerating regression coverage and standardizing test practices.
- Acted as reference for **test automation and development best practices**, influencing engineering standards and pipeline design.

Digital Channels Portfolio (Cloud & Customer-Facing Platforms)

- Coordinated **5+ teams (including supplier teams)** using **LeSS and Lean Kanban**, ensuring alignment on architecture, dependencies, and delivery priorities.
- Coached Product Owners, Scrum Masters, and Agile Coaches on backlog design, flow, and outcome-focused metrics, raising overall product maturity.
- Supported and co-facilitated **PI Planning and ART events** with the RTE, ensuring architecture runway and risk mitigation were embedded into the program.
- Managed workflow, metrics, and outcomes via **Power BI analytics**, increasing transparency on throughput, lead time, and incident trends.
- Served as **single point of contact between executive leadership and delivery teams**, simplifying communication and enabling faster decision-making.

CEAP Portfolio (Agile Transformation & Operating Model)

- Mentored Product Owners, Scrum Masters, Agile Coaches, and Tech Leaders in **Scrum, Kanban and agile principles**, aligning ways of working with strategic outcomes.
- Led and contributed to **agile transformation programs**, connecting organizational strategy to portfolios and products with measurable business impact.
- Advised executives on **scaling agile** and sustaining new practices, including introducing **Target Teal's O2** and reorganizing CEAP members into autonomous teams.

BC Modernization Program:

- Led 14 squads toward modernizing every Zurich's system (internals and client facing ones)
- Did discovery with every stakeholder to fulfill the business rules gaps within existing platforms.
- Guided Product Owners on handling technical requirements and doing valuation on them.
- Guided the engineering team on adopting AI-first mindset.
- Workshop with developers to teach AI best practices and usage.
- Guided others Product Managers on maintaining the program within budget while we innovate.
- Worked closely with Upper management and VP of IT prioritizing next actions and market moves.

AI Usage

• Led Microsoft 365 AI adoption across digital channels and enterprise portfolios by implementing Copilot-powered workflows in Word, Excel, PowerPoint, Teams, and Azure DevOps including AI-generated user stories and acceptance criteria, automated test script generation (Selenium, Cypress, Playwright), and PoC code snippets via GitHub Copilot and introduced Claude as the primary model for long-context technical documentation, cross-team dependency analysis, and executive-facing communications, reducing delivery rework by standardizing AI-assisted engineering and QA practices across 14 squads and 5+ vendor teams.

AI Phase Out

• Designed and executed a phased internal AI rollout strategy across Zurich's BC Modernization Program encompassing governance policies, a vetted prompt library covering both Copilot and Claude workflows, squad-specific AI playbooks, and hands-on developer workshops on AI-first mindset adoption — deploying Claude Code to automate backlog scripting, test pipeline generation, and delivery analytics workflows — driving adoption through an AI champions network and executive stakeholder alignment across VPs, Product Owners, Scrum Masters, and Agile Coaches across LATAM, Switzerland, Spain, and the US.

Key Impacts

- Released **Zurich Brazil's new mobile car insurance management app** and the company's **first conversational chatbot**, improving customer self-service and engagement.
- Trained **30+ Product Owners, 10+ Scrum Masters, and 5 Agile Coaches**, significantly expanding internal product and agile capabilities.
- Co-led Zurich's agile transformation with Executive Managers, creating a more responsive and data-driven delivery organization.

Daniel Law – Remote (US, Europe and LATAM)

Senior AI Technical Product Manager (Fractional / As a Service) January 2025 – January 2026

Fractional AI Product and Technology lead, owning end-to-end delivery of automation initiatives for the finance and back-office domains in a traditional legal environment.

Product & Program Ownership

- Managed projects **from discovery through delivery**, aligning stakeholders on problem framing, success metrics, and rollout plans.
- Owned automation roadmap for the **finance area**, identifying high-impact use cases and orchestrating implementation with vendors and internal teams.
- Built **Mural and Kanbanize** dashboards to track progress, throughput, and blockers, enabling transparent reporting to CFO, COO, and the board.

AI & Automation Delivery

- Designed and implemented routines using **n8n** integrated with **GenAI and LLM models** to enhance data analysis and automate repetitive finance workflows.
- Automated CRM workflows on **Pipefy**, improving traceability and cycle time for service requests and approvals.
- Developed **first-wave MVPs for innovation and automation projects**, validating feasibility and ROI before scaling.
- Introduced and trained teams on using **Gemini and Claude** to:
 - Categorize, deduplicate, and pre-prioritize feature requests and bug reports.
 - Generate SDK snippets, sample requests, and quickstart guides from existing API docs.
 - Draft PRDs, functional specs, and user stories from raw feature ideas, then refine with stakeholder feedback.
 - Repackage product updates into formats suitable for executives, engineers, and customers.

Change Management & Enablement

- Mentored new Product Owners, including for trademarks and patents teams, establishing modern product practices and metrics.
- Trained finance team members on using GenAI day-to-day for invoice analysis, validations, and reconciliations.
- Facilitated company-wide workshops on newly implemented AI automations to maximize adoption and feedback.

AI Usage

- Led Google Workspace AI adoption across practice groups by implementing Gemini-powered workflows in Docs, Sheets, Gmail, and Meet — including first-draft contract generation, email thread summarization, and precedent research via NotebookLM — and introduced Claude as the primary model for long-context contract analysis, sensitive matter research, and high-stakes internal communications, reducing routine drafting time by up to 60% and standardizing output quality firm-wide.

AI Phase Out

- Designed and executed a phased internal AI rollout strategy encompassing governance policy ("Golden Rules"), a vetted prompt library covering both Gemini and Claude workflows, practice-group-specific playbooks, and a three-tier AI certification program — deploying Claude Code to automate legal ops scripting, document processing pipelines, and billing data workflows — driving firm-wide adoption through an AI champions network, hands-on workshops, and executive stakeholder alignment across partners, IT, and compliance.

Key Impacts:

- **Automated provider payment pipeline**, dramatically reducing manual touchpoints.
 - Achieved **80% reduction in accounts payable lead time** wasted on manual processing.
 - Implemented AI-assisted invoice analysis in the finance team's workflow, improving accuracy and speed.
 - **Automated accountability processes** and optimized budget handling with **~43% cost optimization** for internal and external finance requests.
-

Nower – Remote (LATAM, US and Europe)

Principal Technical Consultant September 2019 – June 2023

Principal consultant leading technical enablement, customer success, and transformation initiatives, with strong focus on SaaS product adoption and digital transformation.

Technical Enablement & Architecture

- Developed deep expertise in **Flexera's SaaS product portfolio**, leading discovery, demos, and technical workshops.
- Designed and authored **technical training materials** (e-learning, ILT, videos, hands-on labs) for operators and administrators.
- Conducted **virtual and in-person workshops, webinars, and bootcamps** for global audiences, reducing time-to-value for new customers.

Sales Engineering & Customer Success

- Supported direct and channel sales with qualification, discovery, and tailored demos, improving conversion rates through accurate technical positioning.
- Identified **upsell and expansion opportunities** within existing accounts by analyzing usage and training interactions.
- Contributed to competitive analysis and internal **market intelligence**, influencing positioning and roadmap priorities.

Org Design, Agile & DevOps at Scale

- “Re-wired” client organizations to build **vibrant, high-velocity environments**, focusing on behaviors and skills at scale rather than only processes.
- Connected **organizational strategy to portfolio and team work**, improving prioritization and outcome focus.
- Supported **CI/CD and automation** adoption, co-delivering implementation playbooks and coaching.

Impact

- Reduced onboarding time and increased perceived credibility of the technical enablement function.
 - Increased **product adoption and reduced churn** via engaging, scenario-based training programs.
 - Lowered support load by shifting common issues into **self-service learning assets and labs**.
 - Improved prioritization and business impact through strategy-to-execution alignment.
 - Established **co-delivery models and playbooks** that embedded new behaviors and supported long-term adoption.
-

AsteriscoLab (part of Knowledge Group)

Fractional CTO (CTO as a Service) March 2022 – November 2022

Fractional CTO for a learning-focused spin-off, responsible for building a scalable engineering organization and technical strategy from early stage.

- Defined **short- and long-term architecture and platform choices**, including ML/data priorities to support personalization and scale.
- Led cross-functional squads, improving **predictability, throughput, and quality** of product delivery.
- Implemented end-to-end **observability**, tracking lead time, cycle time, throughput, engagement, and retention for both product and executive audiences.
- Established **CI/CD pipelines, automated tests, and release gating**, reducing regressions and enabling fast, safe releases.
- Hired and mentored **engineering managers, tech leads, Product Owners and Scrum Masters**, designing internal capability programs.
- Served as **technical liaison to CEO and board**, translating strategy into technical OKRs and investment decisions.
- Designed and rolled out **engineering standards and agile practices** (playbooks, training, maturity assessments) to scale consistent ways of working.

Key Impacts:

- Scaled from early-stage team to structured engineering organization while maintaining delivery velocity and quality.
 - Reduced release regressions and time-to-market through standardized CI/CD and test automation.
 - Increased autonomy and ownership via coaching and clear technical/organizational frameworks.
-

M4U, a Bemobi Company – Rio de Janeiro, Brazil

Senior Software Delivery Manager August 2018 – August 2019

Delivery leader for compute and platform modernization programs in payments/financial services.

- Led end-to-end **workstream delivery** for critical modernization initiatives, translating strategy into executable roadmaps with milestones and owners.

- Maintained program artifacts: integrated timelines, dependency maps, RACI, execution dashboards, and runbooks.
- Coordinated cross-team onboarding and migrations with **Cloud, Production Engineering, Traffic, and Security** teams.
- Drove execution and unblocker sessions, negotiating trade-offs and clarifying ownership across teams.
- Operated governance cadences: **weekly syncs, risk reviews, executive briefings, escalation paths**.
- Ensured operational readiness via **CI/CD gating, observability, security checks, and rollback plans**.

Key Impacts:

- Achieved **predictable migrations and delivery**, supported by transparent dashboards and early risk surfacing.
 - Improved reliability with **canary/blue-green rollouts, SRE involvement, and detailed runbooks**.
 - Increased deployment frequency, reduced lead time, and lowered change failure rate and MTTR.
 - Created playbooks and lessons learned that accelerated subsequent migration waves.
-

Concrete Solutions – Rio de Janeiro, Brazil

Lead DevOps Engineer April 2016 – August 2018

DevOps leader responsible for defining and scaling DevOps practices across the organization.

- Defined and drove the **DevOps technical vision**, including infrastructure architecture, CI/CD pipelines, and cloud resource strategy.
- Acted as **technical escalation point** for complex infrastructure and reliability challenges.
- Conducted design reviews focused on **security, reliability, and scalability**.
- Mentored DevOps engineers and implemented **standards, runbooks, and best practices**.
- Led automation initiatives to reduce manual toil, improve deployment safety, and standardize environments.
- Collaborated with engineering, security, and product teams to ensure **scalable and compliant operations**.

Key Impacts:

- Increased **delivery speed and reliability** via standardized CI/CD and improved pipeline architecture.
 - Reduced operational toil with automation and self-service tooling.
 - Improved security posture through automated checks and governance baked into pipelines.
 - Enabled predictable operations and faster onboarding with templates, playbooks, and clear SLOs/metrics.
-

ASC Technology Solutions Private Limited – Rio de Janeiro, Brazil

Full Stack Engineer March 2016 – April 2016

- Developed APIs integrating **club management software** with client systems using **.NET, SQL, and Azure**.
 - Used **Docker and Chef** for deployment, aligning with Clean Code and Scrum practices for higher-quality delivery.
-

Schlumberger – Rio de Janeiro, Brazil

Software Engineer April 2015 – November 2015

- Developed modules for **Protheus** and supported global business systems (Citrix, New Relic).
 - Improved collaboration between development and operations, adopting **Agile and DevOps practices** to streamline delivery.
-

DoeBasico – Rio de Janeiro, Brazil

Founding Member October 2014 – April 2015

- Co-founded a social-impact startup focused on **poverty analysis via data** and direct donor-to-region food parcel programs.
 - Built a **digital platform** connecting donors, NGOs, and city halls, improving transparency and outreach.
-

OceanPact Serviços Marítimos – Rio de Janeiro, Brazil

Software Engineer August 2014 – February 2015

- Developed software features to support **offshore operations**, including user training and ongoing support.
 - Led the company's **first agile adoption** and implemented an automated delivery pipeline, improving release reliability and speed.
-

Church & Dwight Co., Inc. – Brazil

Infrastructure Engineer May 2013 – August 2014

- Managed and maintained IT infrastructure for local and remote users.
 - Collaborated with resellers for Citrix support and introduced **Kanban practices** for operations.
 - Built a **Spiceworks helpdesk dashboard using SQL**, improving visibility and SLA management for support tickets.
-

EDUCATION

Instituto Infnet

Bachelor of Engineering (B.E.), Computer Engineering 2013 – 2018
